Spinal Manipulation for Low Back Pain

Our goal was to determine if spinal manipulation was an effective long-term treatment in patients with chronic low back pain compared to other therapeutic techniques. We determined through the literature while this is effective, patients with back pain require a multi-modal approach to overall management of back pain. This prese

Psychologically Informed Physical Therapy Interventions & ACLR Return to Sport Outcomes

We investigated the use of psychologically informed PT interventions in conjunction with physical rehabilitation focusing on athletes recovering from ACL repairs in improving their levels of self-efficacy and return to sport (RTS) outcomes. Our research highlights the importance of addressing the psychological aspects of RTS for successful outcomes.
